Description

MLCC consists of a conducting material and electrodes. To manufacture a chip-type SMT and achieve miniaturization, high density and high efficiency, ceramic condensers are used.

POE's MLCC is made by NP0, X7R and Y5V dielectric material and which provides product with high electrical precision, stability and reliability.

Applications

- For general digital circuit.
- For power supply bypass capacitors.
- For consumer electronics.
- For telecommunication.

Recommended soldering conditions

The lead-free termination MLCCs are not only to be used on SMT against lead-free solder paste, but also suitable against lead-containing solder paste. If the optimized solder joint is requested, increasing soldering time, temperature and concentration of N₂ within oven are recommended.

Recommended IR reflow soldering profile for SMT process with SnAgCu series solder paste.

Multilayer Ceramic Capacitors

Recommended wave soldering profile for SMT process with SnAgCu series solder.
